

METHOD AND APPARATUS FOR PRODUCING,
CONTROLLING AND DISPLAYING MENUS

ABSTRACT OF THE DISCLOSURE

5 A system that combines a radial marking
menu portion with a linear menu portion in a single
menu display. Item selection in the linear portion
is performed by location selection using a pointing
device. Item selection in the marker portion is
determined by the pattern of a stroke made by the
10 pointing device with the system ignoring linear menu
items across which the stroke completely passes.
